github.com/v1k-t0r

Montenegro (CET)

Senior DevOps/Platform Engineer with 7+ years running production **AWS** infrastructure for fintech and SaaS products, 5 of them on **Kubernetes**. I run platforms end to end: **Terraform**/**Terragrunt**, CI/CD with **GitLab CI**, **GitHub Actions** and **Jenkins**, GitOps with **Argo CD**, edge traffic through **Envoy** behind **ALB** and **WAF**, and disaster recovery. I write automation in **Python**, **Go** and **Bash**.
Before DevOps, I spent 8+ years in system administration: Linux and Windows servers, VMware, physical hardware.

WORK EXPERIENCE

DevOps Engineer

Sweed (Multi-tenant retail POS and e-commerce SaaS platform)

05/2025 - 10/2026 *Montenegro*

https://www.sweedpos.com

Achievements/Tasks

- Took over, documented and maintained an existing **AWS**/**Kubernetes** platform built by an external provider: rolled nodes onto new **Ubuntu** AMIs, fixed broken nodes, and debugged **OOMs**, resource limits and failed rollouts day to day.
- Built the infrastructure for a public API project using **Envoy Gateway** (**Kubernetes Gateway API**) and **Keycloak** (**Kubernetes Operator**) with **AWS Aurora PostgreSQL** database.
- Brought existing **AWS** resources under **Terraform**: imported them, moved and cleaned up state, and fixed drift between the code and the live infrastructure.
- Consolidated service databases onto shared **Aurora PostgreSQL** clusters behind **RDS Proxy**; restored masked production snapshots into dev.
- Wrote the **Terraform**/**Terragrunt** automation that bypasses **Cloudflare** during its outages (security-group rules and **DNS**).
- Moved production edge traffic off **Cloudflare** proxying and **AWS NLB** to dedicated **Envoy** gateways behind **AWS ALB** and **WAF**, including the **DNS** cutover for all production environments.
- Moved from GitLab Container Registry to a central **Amazon ECR** with cross-account, cross-region replication, **IAM**-role access for runners and nodes, and immutable tags.
- Built cross-region **Redis** disaster recovery: backups to **S3** with cross-region replication, automatic restore in the reserve cluster.
- After a **ClickHouse** outage caused by backup I/O overloading a Kubernetes node, redesigned the backup process to limit disk load and cut backup time by 50% (from 32 to 16 minutes).
- Worked on cloud cost savings: right-sized **ClickHouse** nodes, looked at combining nodes, reviewed **S3** backup storage costs and kept non-critical services out of standby environments.
- Responded to highest-priority incidents (global **Cloudflare** outages, a **ClickHouse** data-corruption outage); presented at the post-mortem reviews, defined the action items and delivered the follow-ups.
- Wrote the runbooks used in incidents and disaster-recovery drills: the emergency **Cloudflare** switch-off for all three production clusters, **Redis** switch-over to the reserve region and back, and **ECR** onboarding; collected **Grafana**, **Loki** and **Kibana** diagnostics for the reserve-cluster switch-over drills.
- Managed secrets in a **SOC 2** environment: **AWS Secrets Manager** synced into Kubernetes by **External Secrets Operator**, and **HashiCorp Vault** (roles and policies for new services); deployed a high-availability Vault on an internal cluster (Raft storage, **AWS KMS** auto-unseal, Vault Agent injector).
- Built a client config endpoint on **S3** and **CloudFront** that tells apps which environment to use; made missing static assets return 404 instead of 403 and debugged out-of-sync assets on feature environments.
- Wrote **Kubernetes RBAC** (Role/ClusterRole, RoleBinding) for service accounts, delivered through **Argo CD**.
- Built a custom **.NET** SDK build image with several SDK and runtime versions for the **.NET** services' **GitLab CI** pipelines; handled **NuGet** restore and publishing issues.
- Supported **Kubernetes** delivery: product services deployed with **werf** from **GitLab CI**, infrastructure components through **Argo CD** (**GitOps**).
- Adopted and extended a **Go Slack bot** integrated with **Jira** and **PagerDuty**: added escalation to the infrastructure provider, scheduled duty hand-over to the on-call engineer and the **Helm**/**Argo CD** deployment.
- Shipped a Slack **rollback** application (**Helm**, **Argo CD**, **GitLab CI**) so developers can roll back production themselves.
- Maintained the observability stack (**ELK**, **Prometheus**, **Grafana**, **Loki**, **Jaeger**, **Vector**, **Uptime**); added **OpenTelemetry** traces through Vector and **PromQL** alerts for failed and long-running **GitLab CI** jobs.
- Closed **600+** infrastructure tickets, including **450+** duty requests and **45+** high-priority production issues; took part in the **on-call** rotation.

SKILLS

Amazon Web Services (AWS) | Kubernetes | Terraform | Linux | CI/CD | GitHub Actions | Ansible | Envoy Gateway | Helm | ArgoCD | GitOps | Docker | Jenkins | Terragrunt | Incident response | Bash | GitLab CI/CD | Python | MySQL | Cost optimization | Cloudflare | HashiCorp Vault | Packer | Go | Disaster recovery | PostgreSQL | ClickHouse | Prometheus | PagerDuty | Grafana | OpenTelemetry | RabbitMQ | GDPR/HIPAA | Redis | Keycloak | Elastic Stack (ELK) | Claude Code | SOC 2 | CloudFormation | Nginx | AWS KMS | CloudFront

OTHER EXPERIENCE

Rebrainme - Software Engineer (Part-time)

Education platform

(12/2021 - 07/2022)

- Wrote most of the platform's automated Python checkers for networking labs: each one provisions a student's lab on DigitalOcean, tests it and scores the result.
- Tested routers and containers through the GNS3 REST API, telnet to FRR (OSPF, BGP) and Docker over SSH; wrote shared telnet and Docker helpers and Packer images; shipped through GitLab merge requests and CI to staging and production.

System Administration

(09/2011 - 08/2019)

- Ran Linux (CentOS, Debian, Ubuntu, Fedora) and Windows servers on VMware ESXi and Hyper-V, with MSSQL databases; scripted in PowerShell.
- Deployed Dell, HP and Supermicro servers, managed them via iDRAC, iLO and IPMI, fixed hardware faults, set up routing and switching, IPsec site-to-site and OpenVPN on MikroTik, and the Cisco AnyConnect VPN server.

09/2017–08/2019	**Senior System Administrator** Tekhpromsintez Manufacturing Complex, Russia
10/2014–08/2017	**System Administrator** SNG Global Trading, Korolyov, Moscow, Russia
09/2011–09/2014	**Regional System Administrator** ZAO "TK Megapolis", Moscow, Russia

MENTORING

Rebrainme

- Mentored students in hands-on Linux workshops: answered questions, reviewed practical assignments and helped them troubleshoot.

Alar Studios / Twill

- Mentored engineers on the team through design discussions and reviews.

LANGUAGES

English
Professional Working

Russian
Native or Bilingual

EDUCATION

Bauman Moscow State Technical University

Engineer's degree, Aircraft automatic control systems

(09/2002 - 03/2008)

DevOps Engineer/SRE

Libertex Group (Online broker and trading platform)

10/2023 - 05/2025 *Montenegro*

https://libertex.org

Achievements/Tasks

- Operated **ECS** services (EC2 launch type, Auto Scaling groups) deployed by **Jenkins** jobs, then migrated them to automatic deployment in **EKS** with **GitLab**, **ArgoCD** and **Helmfiles**.
- Ran **EKS** clusters with **Karpenter** for node autoscaling.
- Developed **AWS Lambda Python** functions integrated with **HashiCorp Vault** to automate and optimize internal processes.
- Developed and maintained **AWS** cloud infrastructure with **Terraform/Terragrunt**.
- Diagnosed runtime issues in **Java** / **Spring Boot** services by reading application code, configuration and logs.
- Automated cross-account, cross-region **MySQL** backups with data masking: copied anonymized production databases to **S3** and restored them into the dev environment for testing.
- Maintained the **ELK** stack (**Elasticsearch**, **Logstash**, **Kibana**) for centralized application logging and incident investigation.
- Used **Dynatrace** and **CloudWatch** for application and infrastructure monitoring and alerting.
- Supported **PHP** websites on **Nginx** / **PHP-FPM** behind **Cloudflare**, and services running on **Apache Tomcat** and **Kafka**.
- Supported development teams day to day with deployments, **CI/CD** pipelines and environment issues, and helped them plan and roll out infrastructure changes.

DevOps Engineer

Youhodler (Crypto lending and fintech platform)

07/2023 - 08/2023 *Montenegro*

https://www.youhodler.com

Achievements/Tasks

- Implemented the snapshot controller for **Kubernetes** and wrote a detailed restore guide for **ClickHouse** and **Apache ZooKeeper** using this controller or **clickhouse-backup**.
- Implemented the **AWS ECR** controller for Kubernetes, used it to adopt existing application repositories, and created OCI repositories for app configuration manifests.
- Created a **GitHub Actions** workflow to build and push manifests as OCI images to improve application delivery speed.

DevOps Platform Engineer

Twill (Digital mental-health company, formerly Happify)

01/2022 - 06/2023 *Montenegro*

https://www.linkedin.com/company/twill-health

Achievements/Tasks

- Was a key participant in the creation of a self-service platform for developers.
- Deployed and ran the **Python** microservices on **EKS** and built their CI/CD.
- Ran **Istio** on the **EKS** clusters for ingress (**Gateway API**) and **mTLS** between services.
- Was a key contributor to infrastructure modernization: from **EC2** instances provisioned by **CloudFormation** and configured by **Ansible** to **AWS EKS** provisioned by **Terraform**; from databases on EC2 hosts to **AWS RDS**; from **Ansible Vault** to **AWS Secrets Manager**.
- Worked with event-driven AWS services, including **SQS** and **EventBridge**.
- Worked with **Graylog** and **Fluent Bit** for log collection.
- Worked with the Compliance and Security teams to address identified vulnerabilities and bring applications in line with industry, **GDPR/HIPAA** and customer requirements.
- Made a key contribution to the modernization of CI/CD: from deb packages manually deployed by a **Jenkins** job to fully automatic deployment with **GitHub Actions** and **Helm**.

DevOps Engineer

Alar Studios (Outsourcing company; worked on the Happify mental-health platform, later Twill)

08/2019 - 01/2022 *Montenegro*

https://www.linkedin.com/company/alar-studios

Achievements/Tasks

- Developed and maintained fully automated CI/CD pipelines for code deployment using **Jenkins** (**Groovy** pipelines, shared libraries), **Ansible** and **GitHub Actions**.
- Rewrote the **Ansible** application deploy role: replaced deb packages installed on long-lived **EC2** hosts with container images deployed by **Docker Compose** on new instances, including database migrations and **Ansible Vault** secrets.
- Created, managed and monitored **GDPR/HIPAA**-compliant **AWS** infrastructure: wrote and changed **CloudFormation** templates, with **Terraform**, **Ansible** and **Zabbix**.
- Wrote **AWS WAF** rules, including **OWASP** protections.
- Set up private connectivity between AWS VPCs with **VPC peering** and **Transit Gateway**, including routing and security groups.
- Maintained **PostgreSQL** databases: routine maintenance, **replication** setup and major version upgrades.
- Gained basic hands-on experience with **Microsoft Azure** and **Alibaba Cloud**.
- Built containers to break up a monolithic app into microservices, improving developer workflow, increasing scalability and optimizing speed.
- Integrated unit tests, code quality analysis and code coverage tests into CI/CD (**JUnit**, **SonarQube**).
